📌 Prosper Alebgmiah Asuure

PROFILE

Cybersecurity-focused Computer Engineering graduate and MSc Cybersecurity candidate with practical experience in infrastructure monitoring, vulnerability assessment, digital forensics tooling, and secure application development. Experienced in anomaly detection, technical compliance validation, system risk identification, and secure authentication implementation. Strong foundation in Linux systems, networking, and security operations, with demonstrated ability to analyze threats, assess infrastructure resilience, and contribute to secure system design in regulated environments.

PROFESSIONAL EXPERIENCE

National Service Personnel <i>National Communications Authority</i>	11/2023 – 09/2024 Bolgatanga, Ghana
- Monitored national communication spectrum infrastructure to detect irregular transmissions and technical anomalies. - Investigated signal interference and escalated suspicious findings for regulatory enforcement. - Conducted compliance validation against technical standards and operational policies. - Documented incidents and technical findings in structured reports for regulatory review. - Contributed to maintaining operational integrity within a regulated communications environment.	
Intern <i>Ghana Water Company Limited</i>	10/2021 – 12/2021 Bolgatanga, Ghana
- Provided on-site technical support for hardware upgrades and system maintenance. - Managed and verified technical data within the utility's database to ensure administrative efficiency.	

EDUCATION

MSc Cybersecurity (In Progress) <i>Academic City University</i>	01/2025 Accra, Ghana
Relevant Courses Network Security Digital Forensics Cyber Risk Management Cryptography	
BSc. Computer Engineering <i>University of Energy and Natural Resources</i>	09/2019 – 12/2023 Sunyani, Ghana
Relevant Courses Data Structures and Algorithms Microprocessors Digital Mobile Communication Networking and Data Communication Embedded Systems Software Engineering Computer Architecture.	
General Science <i>St James Seminary/Senior High School</i>	09/2016 – 06/2019 Sunyani, Ghana

SKILLS

Web & Application Technologies

JavaScript (ES6+) | Node.js | Express.js | HTML5/CSS3 | EJS | jQuery | REST APIs | PostgreSQL | React.js | Authentication (Passport.js, bcrypt)

Operating Systems

Linux (CLI proficiency) | Windows

Security Tools & Frameworks

Volatility | Autopsy | FTK Imager | Wireshark | Nmap

Version Control & Dev Tools

Git | GitHub | npm

Concepts & Frameworks

CIA Triad | Risk Assessment | Incident Response Lifecycle | Access Control Models | Secure Authentication Mechanisms

PROJECTS

Digital Forensics Analysis Lab | Windows 10 System Breach

- Performed memory analysis using Volatility to identify suspicious processes.
- Conducted disk image investigations using Autopsy.
- Acquired forensic images using FTK Imager.
- Documented findings in structured investigative reports.

Campus Infrastructure Security Assessment | Academic City University

- Conducted vulnerability assessment of institutional IT infrastructure.
- Identified network misconfigurations and Wi-Fi security weaknesses.
- Evaluated physical security exposure affecting digital assets.
- Proposed remediation strategies to improve resilience.

Data Governance Infrastructure | National Investment Bank (NIB) Simulation

- Categorized sensitive data for a cloud-based CRM system to ensure compliance with NIST 800-53 and ISO 27001.
- Designed a continuous monitoring strategy to track data access (AC-2) and audit trails (AU-2).
- Produced a security assessment report to justify the Authorization to Operate (ATO) based on risk analysis.

Secure Web Application Development

- Implemented secure user authentication with bcrypt hashing and salting.
- Integrated OAuth-based login system.
- Designed secure session management mechanisms.
- Applied input validation and secure database interaction principles.

CORE COMPETENCIES

Security Operations & Monitoring

- Security event monitoring
- Anomaly detection & escalation
- Technical compliance validation
- Log analysis fundamentals
- Incident documentation

Digital Forensics & Investigation

- Memory analysis (Volatility)
- Disk forensics (Autopsy)
- Evidence acquisition (FTK Imager)
- Chain-of-custody awareness
- Investigative documentation

Infrastructure & Risk Assessment

- Network vulnerability assessment
- Wi-Fi security evaluation
- Risk identification & remediation planning
- Infrastructure security review

Secure Development & Authentication

- Multi-factor authentication implementation
- Password hashing & salting (bcrypt)
- OAuth integration
- Session management
- Secure database interaction

Systems & Networking

- TCP/IP fundamentals
- Linux command-line operations
- Network troubleshooting
- System hardening basics
